

Canebrake Circuit Plan

Planned Work:

- Upgraded automation
- Updates to associated switching plans

Expected Improvements:

- Will be assessed after 2021 PSPS season

Note: The southern portion of the Canebrake is the area where customers have experienced 4 or more PSPS de-energizations since 2019, and upgrades targeted on this area have already been implemented. SCE will continue to monitor this circuit during the upcoming PSPS season and reassess as needed.
