Interconnection Study Document History

Project No.	Project Name	No	Date	Document Title	Description of Document
WDT1266ISP	[REDACTED]	2	5/17/2016	Addendum #1 Facility Study Final Report	The purpose of this report is to update the Final Facility Study to reflect removal of [REDACTED] transformer bank, and publish the written comments provided by the IC to SCE in accordance with the timelines stated per Section 5.8.2.4 in GIP
WDT1266ISP	[REDACTED]	1	4/1/2016	Facility Study Final Report	Report to disclose results of Facility Study.

## Executive Summary

██████████ an Interconnection Customer (IC), received a Facility Study report dated April 1, 2016 for its Interconnection Request (IR) to Southern California Edison (SCE) for their proposed ██████████ WDT1266ISP.

During the results meeting of the Project on April 28, 2016, which was subsequent to the release of final Facility Study report of the Project it was determined that the scope and associated costs for the installation of the third (3<sup>rd</sup>) 220/66 kV transformer banks at ██████████ is no longer allocated to the Project.

The final Facility Study report dated April 1, 2016 was updated accordingly, and is attached as part of this Addendum report.

The attached updated final Facilities Study report for WDT1266ISP (Attachment A) replaces and supersedes the final Facilities Study report for WDT1266ISP dated April 1, 2016.

In addition, subsequent to the distribution of the report, to comply with the Generator Interconnection Procedures (GIP) obligation to include the IC's written comments on interconnection studies as modified by FERC Order 792, SCE is publishing any written comments submitted by the IC:

- Within ten (10) Business Days of receipt of the final Facility Study report, but in no event less than three (3) Business Days before the Results Meeting conducted to discuss the report; and/or
- Additional comments on the final Interconnection Study report up to (3) Business Days following the Results Meeting

This addendum report discloses below the written comments provided by the IC to SCE in accordance with the timelines stated in the GIP for final Facilities Study Report for WDT1266ISP dated April 1, 2016.

Please refer to separate document

1. Written comments provided by IC within ten (10) Business Days of receipt of the final Facility Study report dated April 1, 2016.
  - a. SCE to address the IC's pre-submitted questions and comments listed below pursuant to GIP Section 5.8.2.4:
    1. As the report is currently written, we currently do not require B2 (SMS), if [REDACTED] is downsized (B1 not required), we are only responsible for case A costs at this time correct?
    2. If just Case A is done, what is the construction time line in this case? Does this decrease from 27 months?
    3. What is performed in a charging study? Can it be shared with [REDACTED]?
    4. How do we find out if and when B2 (SMS) is required?
      1. What conditions trigger the need for an SMS (i.e. what would need to change to necessitate the SMS)?
      2. Are we notified with enough time to construct the system in order to avoid any violation of interconnect?
      3. If this work needs to be performed far in the future (10-20yrs), will the cost of implementation be reassessed at that time?
    5. What is the drop dead date for the downsizing of WDT 1007 for the third transformer bank to be excluded from [REDACTED] upgrades?
      1. [REDACTED] has already posted an LC against the cost of the third transformer bank – what is the drop dead date for the refund of the excess posting amount?
    6. Is an in-service date of 12/31/2019 possible?
2. Written comments provided by IC three (3) Business Days following the Results Meeting.
  - a. None
